

ENORMOUS LOADS U. S. GOODS GO TO ALLIES

Meats, Dairy Products and
Bread Form Bulk of
Shipments.

WASHINGTON, April 25.—American contributions of food to the war populations of the allies increased enormously during March. Statistics for the month, made public today by the bureau of foreign and domestic commerce, showed that exports of wheat and wheat products amounted to \$131,922,224, an increase of 125 per cent in February and breadwheat exports alone were worth \$65,295,219, which was 100,000 more than the preceding month.

It was in March that the food administration decided to ask greater sacrifices from the people at home in order to conserve supplies for the allies.

Exports of cotton and minerals decreased during the month, partly to permit the greater shipment of food. In March, for example, 248,888 bales, a total of 3,744,161 bales of cotton had been sent abroad, compared with 3,600,000 in February.

last year. Shipments of mineral oil for the same period were 1,935,290 gallons and 2,045,588,749 gallons, respectively. In nine months, 49,294 pounds of cotton seed oil have been exported, less than one-half of the 102,817,296 pounds exported in the same period of the last fiscal year.

Nine months exports of breadstuffs this year have been worth \$147,149,777, compared with \$232,135,777 last year. The value last year was \$284,584,777. Shipments of meat and dairy products in nine months have been worth \$777,777, compared with \$272,132,883 last year.

Figure 1 is a line graph showing the percentage of total body weight in fat (Y-axis, 0 to 30) versus age in years (X-axis, 0 to 100). The graph shows a steady increase in body fat percentage from approximately 10% at age 0 to 25% at age 100. A horizontal line is drawn at approximately 15% body fat, and a vertical line is drawn at age 40. The area above the horizontal line and to the left of the vertical line is shaded, representing the 'fatness' of the population before age 40.
